

# Danil Bardiukov

## QA Engineer

- Hands-on experience in Manual testing of Web and Mobile applications (Functional/Non-functional testing, frontend, API, Data Base, Linux Console);
- Excellent problem-solving and leading skills due to 9+ years experience in Sales & Marketing in a Senior level position;
- Able to learn quickly and highly motivated;

**Portfolio** - [github.com/QABard](https://github.com/QABard)

Open to communication, new acquaintances, and opportunities.

## Experience

### 2023 (September) - present

LizaAlert

#### QA Engineer Junior

We are developing a platform for training volunteers who want to participate in search and rescue operations. Our QA team consists of 10 people, including a QA Lead.

My responsibilities include requirements analysis, test design, creating test documentation (test cases, checklists), test execution, and documenting bugs. We primarily focus on functional testing and UI/UX.

In addition, I participate in discussions related to the product's features and attend weekly/daily meetups and retrospectives.

### 2023 (July) - present

Yandex

#### QA Engineer Junior

We are developing a **project management system** for an **international team** with unique features. The project team consists of 19 members.

I am part of a team of 5 junior testers, and I serve as their lead. In this role, I organize the testing process, conduct meetups, create test documentation (test plans, checklists, test cases), and perform both functional and non-functional testing, including performance testing (BlazeMeter + Postman).

As for now, we have written a total of over 1000 check-list cases.

The test coverage of the functionality is approximately 80%.

We have identified 63 bugs (12 of which are classified as blocker, critical, or major).

Project tech stack

-Frontend: React.js, React Router 6, JavaScript, HTML5 and semantic tags, CSS3.

-Back-end: Python 3.9, Django 3.2, Django REST Framework 3.14, PostgreSQL 13, Unicorn, NGINX, Docker.

QA Engineer team uses: PostgreSQL + DBeaver, Rest API, Postman, Swagger, DevTools, Charles Proxy, TMS Qase.io + GitHub, BlazeMeter.

### 2023 (July) - 2023 (August)

Yandex

#### QA Engineer

I was the sole QA (Quality Assurance) member in a 13-person development team for the newly developed internal Yandex system with gamification elements. The service is currently in the preparation stage for deployment, and due to NDA (Non-Disclosure Agreement) regulations, I cannot provide specific details.

I independently organized the testing process, created test documentation (test plans, checklists, test cases), and conducted functional testing (on CI/CD). UI testing was not performed.

I have written over 365 test cases.

The test coverage of the functionality is approximately 95%.

I have identified 38 bugs (27 critical, major).

Tools I've used in testing: PostgreSQL + DBeaver, Rest API, Postman, Swagger, DevTools, Charles Proxy, TMS Qase.io and GitHub.

### Email

[bardiukov.ds@gmail.com](mailto:bardiukov.ds@gmail.com)

### Address

Bangkok, Thailand

## Education

2022

### Yandex Practicum

Postgraduate Degree, Quality Assurance Engineer

2013

### Far East Federal University

Bachelor of Engineering - BE

## Expertise

- Test Analysis / Test Design
- Functional / Non functional Testing
- Exploratory testing
- Full / Regression / Smoke Testing
- Black Box / Grey Box Testing
- Detail-oriented approach in execution
- Great problem solving skill

## Courses

- Yandex - JAVA (in progress)
- EPAM - Automated testing (in progress)

## Honors - Awards

- Russia Champion in Sport Knife Fighting

## Language

English (B2 - C1)

Russian (native)

# Experience

Project tech stack

-Frontend: React, Next, Redux toolkit, Docker, Typescript.

-Back-end: Python 3.11, Fastapi 0.101.0, Pytest 7.1.2, SQLAlchemy 2.0, Alembic 1.11.2, Pydantic 2.0.2, Psycpg2 2.9.3, Postgres 13.3, Docker

Tools I've used in testing: PostgreSQL + DBeaver, Rest API, Postman, Swagger. DevTools, Charles Proxy. TMS Qase.io and GitHub.

○ **2022 (Oct) - 2023 (May)**

Yandex

## QA Engineer Intern -> Junior

During this time, several services were tested. In total, I found **238 bugs** (about **25** of them were **blocking** and **critical**).

**Yandex Routes** web: I performed manual testing of a client-server web application.

This involved analyzing product requirements and visualization, analyzing calculation and formula logic, and designing test cases for the main functionality. I also conducted cross-browser testing, composed checklists for UI, tested new functionality, identified and reported bugs, and worked with databases.

**Yandex Routes** mobile: I performed manual testing of a mobile application. In the absence of technical requirements, I compiled documentation and created checklists for testing new functionality. I tested the functionality and logic using Android Studio and reported bugs.

**Yandex Metro** mobile: I performed manual testing of new backend functionality via API. This involved analyzing documentation, creating checklists for testing, and conducting tests using tools like Postman. I also identified and reported bugs.

**Yandex Market** Web and Mobile Application: I worked with both the web and mobile versions of the application. My tasks included requirements analysis, visualization, and writing checklists and test cases for UI, functionality, and backend operations via API. I conducted tests using tools like Charles and Postman and reported bugs.

○ **2016 - 2022**

Lingua Guru / Chto Delat Avtomatizacia

## Digital Marketer Junior -> Digital Marketer Senior

- Responsible for all the processes taking place in the online environment;
- Responsible for the company's online presence;
- Responsible for Internal/External technical system integrations;
- Responsible for creating and developing EDU projects from scratch;
- Responsible for automation of processes;
- Responsible for marketing planning and its execution;
- Creating and Developing a projects from scratch (defining the goals of the project and creating a development plan);
- Web-sites developing / SEO-optimization / SERM;
- Business processes automation (
  - Identifying processes that can be automated to save time and increase efficiency;
  - Choosing the right tools and technologies to automate the identified processes;
  - Testing and refining the automation processes to ensure it is reliable and effective).

○ **2009 - 2016**

## Sales Manager -> Head of Sales Department

Irrelevant sales experience B2C/B2B

○ **2007 - 2008**

## Construction Engineer (civil and industrial)

Irrelevant construction engineering experience
